The Archetype and Archetype Narrow locking systems were designed for Fleetwood sliding door products. Consider the following design features:

1. Archetype Actuator
2. Archetype Recessed Pull
3. Archetype Second Latch Feature
4. Archetype Narrow Actuator & Pull
5. Maximum Security Stainless Steel Latch
6. Reinforced Adjustable Strike
7. Optional Actuator Only
8. Optional Lock-Out (During Construction)
9. Optional Keyed Lock
10. Optional Archetype Actuator Lever
11. Optional Edge Pull

1. Archetype Actuator
   The Archetype Locking System is engaged by turning the flush actuator either left or right (see below). The actuator is made of #316 stainless steel, and then finished with a subtle brushed surface. The final process treats the exposed surfaces to electro-polishing for optimum corrosion protection. (Black powder coat paint is optional.)
   - A flush design allows the lead panel to slide past adjacent panels or into a pocket wall.
   - The face of the actuator indicates if the door is locked or unlocked.
   - The Fleetwood branded latch cover plate completes the package.

2. Archetype Recessed Pulls
   The Archetype Locking System comes standard with interior and exterior pulls (shown below). Each handle is recessed for the deepest pocket possible to allow for comfortable operation. Each pull is finished to match the actuator.

---

1 The Archetype Narrow comes standard on all Entry Level sliding door products (Series 1070, 1050 & 1000.) In these products the recessed handles, actuator and pulls are made of brass base material and powder coated with a silver paint.
3. **Archetype Second Latch Feature**
   The **Archetype** is offered with a second latch on non-thermally broken multi-slide doors exceeding 96” in height. The second latch is engaged the same time that the primary latch is operated. (Not available on the **Archetype Narrow**.)

4. **Archetype Narrow Actuator & Pull**
   The **Archetype Narrow** locking system is engaged by moving the flush actuator up or down within the interior pull. The actuator is made of #316 stainless steel and then finished with a subtle brushed surface. The final process treats the exposed surfaces to electro-polishing for optimum corrosion protection (black powder coat paint is optional).
   - As with the **Archetype** actuator, the flush design allows the lead panel to slide past adjacent panels or into a pocket wall.
   - The face of the actuator indicates if the door is locked or unlocked.
   - On Fleetwood’s more cost effective series’ the Interior Flush Actuator & Pull with Exposed Fasteners is offered.
   - For a more aesthetically pleasing look Fleetwood also has the Interior Flush Actuator and Pull with hidden fasteners available on select series.
   - The Fleetwood branded latch cover plate completes the package.
5. **Maximum Security Stainless Steel Latch**
Both the Archetype and Archetype Narrow locking systems utilize a 6-ply, laminated, stainless steel hook latch for unparalleled security. Though a seemingly basic operation, the patent was granted on the unique mechanics transitioning from the actuator to the latch. The system is so strong it passed the HVHZ hurricane impact testing that exceeded a 200 mph wind velocity and exceeds 800 lbs. to surpass government forced entry requirements.

6. **Reinforced Flush Adjustable Strike**
The Archetype strike plate consists of superior components, making it an ideal complement to the Archetype and Archetype Narrow latching systems.

7. **Optional Actuator Only**
One option on the Archetype locking system is to purchase only the actuator. The depth of the escutcheon allows a modest area for grasping, or custom pulls can be applied.

8. **Optional Lock-Out Feature**
The Archetype locking systems allow the owner to remove the actuators once in a locked position. This has particular benefits during construction as it dissuades other trades from using the sliding doors as a passageway.
9. **Optional Keyed Lock**
   Both Archetype and Archetype Narrow locking systems offer the option of a relatively flush exterior keyed lock. The cylinder is a 5-pin Schlage that can be keyed alike for multiple doors on the same project.

10. **Optional Archetype Actuator Lever**
   The Archetype Actuator Lever is to help those that may have problems gripping the standard actuator. Once attached, the 2-3/4” long lever only requires 60 degrees of rotation to operate the latch. The lever is shipped separately and can quickly be installed. It is offered in brushed stainless steel or black painted stainless steel. (Not available on the Archetype Narrow.)

11. **Optional Edge Pull**
   All pocket sliding doors come standard with Fleetwood’s proprietary Edge Pull. The pull is mortised into the edge of the lock stile, just a few inches below the latch cover plate. The pulls are made of #316 cast stainless steel and come standard with a lifetime adjustable screw to ensure proper tension.
